**THICKENER**

**TH-935 Acrylic emulsion associative thickener**

**DESCRIPTION**
TH-935 is an associative thickener that provides excellent film build, leveling, outstanding resistance to roller spattering, and resistance to microbial attack. It is designed to give medium shear rate viscosity in latex paints.

**TYPE**
Acrylic emulsion polymer

**KEY FEATURES**
- Excellent film build
- More cost effective than cellulosics
- Easy to incorporate into formulations
- Better spatter resistance than cellulosics
- Resistant to microbe and enzyme attack
- Better levelling potential than most cellulosics

**TYPICAL PROPERTIES**

</tbody>
</table>

**APPLICATION**
Recommended method: TH-935 is diluted 3-5 times by water, slowly added in pH 8-9 thickening aqueous system and then rapidly stirred it for 10 to 15min. If the viscosity is high, join the right amount organic silicon flatting agent or wetting agent to adjust viscosity. Recommended dosage: 0.2-3%.

**STORAGE AND HANDLING**
- Available in 25 kg/barrel or 200kg/barrel
- Store products in tightly closed original containers at 5-40°C
- Shelf life: 12 months from delivery date
- According to non-dangerous goods transport
